

# How much does it cost you to change a light globe?

Do you want to dramatically reduce your lighting maintenance costs and reduce your risk hazards?

Lighting maintenance is a necessity and often an expensive job in the industrial work place today. The costs involved are usually high due to the positioning of light fittings. This no longer needs to be the case. The installation of an In2 Light Hatch® will dramatically reduce the costs involved in changing light globes on industrial work sites.

Risk hazards are also dramatically reduced, as there is no need to use a cherry picker or erect scaffolding to change a light globe ever again.

## The In2 Light Hatch® features and benefits

- Once off - Easy installation
- Easy to open and close with a built in lock down handle
- Light globes are easily changed - reducing maintenance time
- Huge cost savings in lighting maintenance - No more hiring of cherry pickers or erecting scaffolding
- Dramatically reduces risk hazards in the work place
- No reduction in floor integrity after installation
- 100% Australian Designed and made
- Strong 5mm round bar safety basket underneath light
- Galvanised for industrial applications
- Industrial grade Vigil anti-slip® coating on the top plate
- Easily visible with anti-slip coating available in various safety colours including Photo luminescent
- Different types of lights can be easily fitted
- The In2 Light Hatch® never needs maintenance

In2 Light Hatch® Closed

## Easy Installation

Cut the floor of the walkway, weld in the In2 Light Hatch® (no need to disassemble the In2 Light Hatch®), position the electrical connections and installation is complete. It's as easy as that.

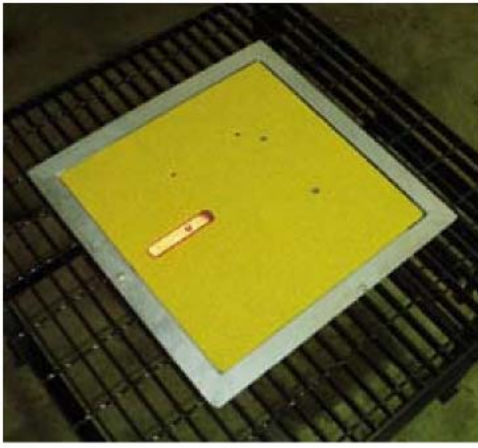

## Want to know more?

If you would like to know more information about the In2 Light Hatch® please call Zedflo on 08 9409 7566.

In2 Light Hatch® Open

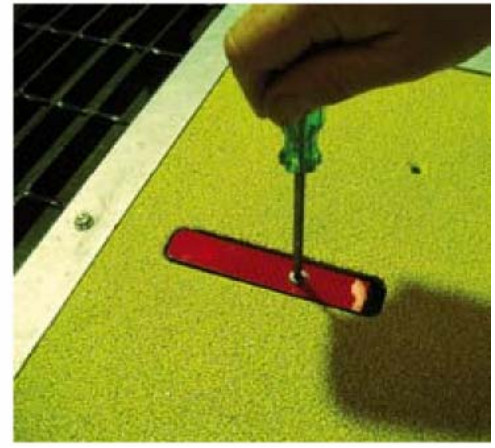

The closed In2 Light Hatch® has a built in lockable handle which reduces the risk of trips and helps to ensure that the hatch is fully closed after being accessed.

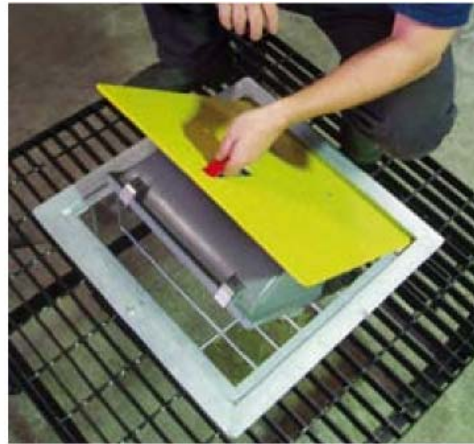

There is NO reduction in floor integrity after installation. The walkway or platform can be used normally once the In2 Light Hatch® is installed.

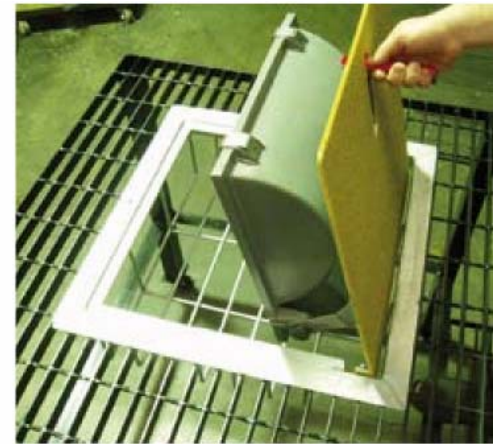

The lockable handle is released and fixed in place with a Phillips head screwdriver.

The built in handle is revealed with the push of a finger. The handle falls back in place when released.

The In2 Light Hatch® is easily opened and closed with the built in handle.

The light is attached to the underside of the hatch top plate and is revealed when the hatch is opened.

Once the In2 Light Hatch® is fully opened, it stays open with its own weight and the light globe can be easily changed.

The strong 5mm round bar safety basket helps to stop items falling through the opening. It also protects the light when closed.

The In2 Light Hatch® is closed after the light globe is changed. The handle is fixed back in place and the walkway returns to normal.
