Thousands of process plants all over the world use Safety Instrumented Systems (SIS for short), to protect people, equipment and the environment from catastrophe. During recent years, various countries and regions have made it mandatory to use these systems, to prevent accidents and mishaps.

Unfortunately however, knowledge about Safety Instrumented Systems is perceived by many people to be a hidden art that only a few chosen people know (or are capable of knowing), which is just not true. Any professional who has work experience and / or qualifies to work in the process industries can easily learn all about Safety Instrumented Systems.

Until now, however, there were few cost-effective resources that a person who wanted to know more about SIS in detail could refer to. Let us take a look at these now. These resources were mainly of three types; books on the subject, some online training courses and “free white papers” that one could find on the internet. The books are quite excellent, but you require to read, understand and digest, at least three of them (to gain a complete knowledge on the subject) that can be used in your work. This requires a lot of time that many people today simply cannot spare. Many online training courses are available, but they are mere copies and summaries of materials in the books and/or power point presentations of long gone seminars in a new avatar. The topics in the white papers and other documents is pretty good, but it ranges from the very basics to the very complex and everything in between. Reading and understanding it is like trying to drink a glassful of water from a fire hose. Theoretically possible but practically impossible.

But now, there is an alternative—it is the newest e-learning course from Abhisam Software. This course on Safety Instrumented Systems is designed to make the learning experience comfortable and easy. Everything is explained in easy to
understand terms, with plenty of graphics, interactive simulations and worked problems. Everything that you need to know about Safety Instrumented Systems, put together, in an easily digestible form, stripped of all the complexity, but still useful to impart skills to you that you can actually use in your work.

To reiterate once again, this course is NOT a rehashed power point presentation. It is a full fledged e-learning course with interactive animations, simulations, graphics and text. It also has many worked out example problems, to help understand the logic behind designing and operation of Safety Instrumented Systems.

The course contents

The course has SEVEN modules as below

1. Introduction to Safety Instrumented Systems (SIS for short)
2. Hazards, Risks & their analysis
3. Failures & Reliability
4. Safety Integrity Level
5. SIS Standards
6. SIS in practice
7. SIS Testing & Maintenance

Detailed course contents

The detailed course contents are given below

**MODULE 1- Introduction to SIS**
- What are Safety Instrumented Systems?
- Basic Ideas about SIS
- Functional Safety
- Instrumented Systems & Safety Instrumented Systems
- BPCS
- BPCS and SIS
- Safety Instrumented Function
- Safety Instrumented Function-2
- Safety Instrumented Function-3
- Emergency Shutdown Systems
- Need for a separate SIS
- Simulation exercise
- Learnings from the exercise
- Typical architecture
- Integrated BPCS & SIS
- Integrated BPCS & SIS-2
- Examples
Differences between BPCS & SIS

**MODULE 2-Hazards, Risks & their analysis**
- Hazards & Risks
- Types of hazards- Fire & Explosions
- Types of hazards-Toxic Material
- The Safety Lifecycle
- Steps in analysis
- Preliminary Hazard Analysis
- HAZOP
- HAZAN
- Consequence Analysis
- Risk
- Risk graph
- Risk Reduction
- Risk Reduction-2
- The ALARP principle
- Risk Reduction in process plants
- Risk Reduction explained
- Risk reduction using an SIF
- Risk reduction using an SIF
- Layers of Protection
- Layers of Protection in the process industries
- Preventive & Mitigative layers
- Safety Requirement Specification
- Safety Requirement Specification-2
- Diversity

**MODULE 3-Failures & Reliability**
- Failures
- Types of failures
- Types of failures-2
- Types of failures-3
- Dangerous & Safe failures
- Dangerous & Safe failures
- Safe Failure Fraction
- SFF Pie Chart
- Proof Test Interval
- Diagnostic Coverage
- Common Cause Failures
- Common Cause Failures-2
- CCF Example
- Diversity
- Reliability
- Failure Rate
- MTTF
- MTTR
- MTBF
- Failure Data
- Software Reliability & fault injection
- Reliability Block Diagrams
- Reliability Block Diagrams-2
- Reliability Block Diagrams-3
- Redundancy and Reliability
- Fault Tree Analysis
- Fault Tree Analysis Example- 1
- FTA and RBD
- Fault Tree Analysis Example-2
- Fault Tree Analysis Example-2
- Fault Tree Analysis-Probabilities
- Event Trees
- Event Tree Components
- Event Tree Analysis Example
- Fail-Safe and Fail Danger modes
- FMEA
- FMEDA
- FMEDA report
- How to use the FMEDA report
- Example FMEDA report
- Redundancy
- Redundancy and Voting
- Voting Systems 1oo1
- Voting Systems 1oo2
- Voting Systems 1oo2D
- Voting Systems 2oo2
- Voting Systems 2oo3
- Spurious Trips
- Concept of Demand
- Demand in a plant
- Low Demand & High Demand
- PFD

**MODULE 4-Safety Integrity Level**
- Introduction to Safety Integrity Level
- What SIL is not
- Is SIL applicable to me?
- SIL 1 to SIL 4
- SIL for Demand Mode
- SIL for Demand Mode-Example
- SIL for Continuous/High Demand Mode
- The SIL process
- Common SIL questions
- Common SIL questions-2
- Target SIL-Qualitative & Quantitative methods
- Risk Reduction Factor-1
- Risk Reduction Factor-2
- Safety Availability and PFDavg
- SIL calculation Example
- SIL calculation Example
- SIL calculation Example (contd)
- SIL calculation Example (contd)
- SIL Calculation example-(modification)
- SIL Calculation example-additional layers
- SIL Calculation example-caution
- Consequence Only Method
- Hazard Matrix Method
Hazard Matrix Method (contd)

Risk Parameter Graph-1
Risk Parameter Graph-2
Risk Parameter Graph-3
Calibrated Risk Graph-1
Calibrated Risk Graph-2
LOPA method
Conducting a LOPA
More about LOPA
LOPA Example
LOPA Example contd
LOPA Example contd 2
LOPA Example contd 3
Target SIL & SIL verification
SIF design process
PFD of simple loop
SIL verification example-1
SIL verification example-2
SIL verification for complex loops
Markov Modeling-1
Markov Modeling-2
Markov Modeling-3
Markov Modeling-4
Simplified Equations
Use of Simplified Equations-Example
Architectural Constraints
Architectural Constraints IEC 61508
Hardware Fault Tolerance-IEC61508
Hardware Fault Tolerance (contd)
Architectural Constraints-Example
Hardware Fault Tolerance-IEC61511
Hardware Fault Tolerance example
Conclusion

MODULE 5-SIS Standards
- Introduction to Standards in SIS
- AK 1 to AK 8
- IEC Standards
- IEC 61508
- E/E/PE systems
- IEC 61508-Safety Life Cycle
- IEC 61511-Basics
- Relationship between IEC 61508 & IEC 61511
- ISA S84 Background
- ISA S84 Differences
- Where to get standards
- What standards apply to me?

MODULE 6- SIS in practice
- Components of the Safety Loop
- Types of logic Solvers
- Hardwired logic solvers-Trip amplifiers

© 2009-2010. Abhisam Software. All rights reserved.
MODULE 7-SIS Testing & Maintenance

- Need for testing
- Testing-Example
- Breakup of failures
- Testing the components of a SIS
- Testing Sensors & Transmitters
- Testing Logic Solvers
- Testing valves
- Valve Testing-Bypass method
- Partial Stroke Testing
- Partial Stroke Testing-ISA method
- Valve Testing- Mechanical Stoppers
- Valve Testing-Smart Positioner method
- PST-Advantages & Disadvantages
- Testing and PFDAvg
- Conclusion

Self Assessment Test

Why you should get this course

As plants and facilities become more and more automated, with a lesser and lesser appetite for risk, it is only natural that the use of Safety Instrumented Systems to protect people, assets and the environment, is only growing. It is extremely important that if you are involved in the specification, designing, usage or carrying out any other activity that concerns Safety Instrumented Systems, Emergency Shutdown Systems or similar safety related automation, you must understand these systems thoroughly.
Why you should get this course from Abhisam

Abhisam Software is an e-learning company actively involved in training and education of technical personnel like you. Abhisam Software is not a vendor of Safety Instrumented Systems, nor a system integrator, nor a consultant. Therefore the course is entirely vendor neutral. This is important to you, as some of the “free” course providers have their own axes to grind, which you should keep in mind.

Our earlier courses on Hazardous Area Instrumentation, RFID and Gas Monitors have become very popular and we count many engineers and technicians working in many industries and companies, big and small, as our customers and end users.

To the best of our knowledge there is no other course that compares to this presently, available in the market, for such a price.

Course delivery format

For individual learners, a download link is provided with a license key that is good for use on one computer. A backup CD can be ordered at additional cost. For companies, a tiered discount based pricing (based on number of licenses) is available.

More information can be found online at http://www.abhisam.com/SafetyInstrumentedSystems.htm

How to order

These courses can be ordered in a variety of ways, by online payment via credit or debit card, via wire transfer payments or manual orders.

Orders are processed by Share-It, our payment processing partners.

Please send your requirements to sales@abhisam.com
